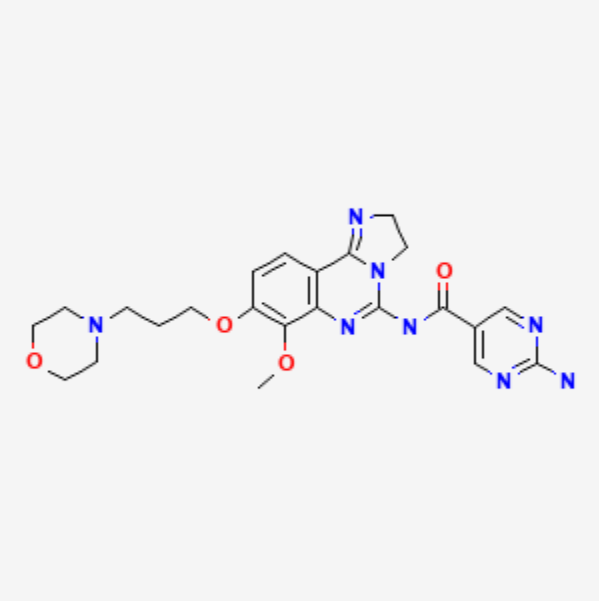
Copanlisib

Revised: November 15, 2023.

CASRN: 1032568-63-0



Drug Levels and Effects

Summary of Use during Lactation

Copanlisib has been removed from the US market. No information is available on the clinical use of copanlisib during breastfeeding. Because copanlisib's half-life is about 39 hours, it might accumulate in the infant. The manufacturer recommends that breastfeeding be discontinued during copanlisib therapy and for 1 month after the last dose.

Drug Levels

Maternal Levels. Relevant published information was not found as of the revision date.
