Raxibacumab

Revised: November 15, 2023.

CASRN: 565451-13-0

Drug Levels and Effects

Summary of Use during Lactation

No information is available on the clinical use of raxibacumab during breastfeeding. Because raxibacumab is a large protein molecule with a molecular weight of 146,000 Da, the amount in milk is likely to be very low.[1] It is also likely to be partially destroyed in the infant's gastrointestinal tract and absorption by the infant is probably minimal.[2] Until more data become available, raxibacumab should be used with caution during breastfeeding, especially while nursing a newborn or preterm infant.

Drug Levels

Maternal Levels. Relevant published information was not found as of the revision date.

Infant Levels. Relevant published information was not found as of the revision date.

Effects in Breastfed Infants

Relevant published information was not found as of the revision date.

Effects on Lactation and Breastmilk

Relevant published information was not found as of the revision date.
