Custom Report Formats

Created: July 7, 2005; Updated: February 18, 2014.

Can you tell me where I can find perl script to transfer a dbSNP summary report to the format I want?

dbSNP does not provide a custom report service due to limited resources. We provide standard formats (FASTA, XML, ASN.1, flat file) only. To generate a custom format, you'll have to convert the data yourself. dbSNP can provide suggestions on how to perform the conversion, but ultimately the user will have to write the converter themselves or obtain programming help from their local institutions. **(06/02/08)**
